

Istinye University adheres to the principles outlined in its "Research Quality Policy" as part of its commitment to implementing the "Research Policy" in line with its vision, mission, and values. This institutional culture aims to sustainably provide the necessary qualities to become an attractive center, prioritizing continuous improvement and striving for excellence in research.

Research Quality Policy

1. The sustainable infrastructure and service standards and incentive mechanisms required by research activities are secured within the framework of institutional structuring.
2. The needs of researchers are to be monitored. Precautions will be taken against anticipated or emerging risks. Institutional processes will be streamlined and improved.
3. Procedures for the transfer of quantitative and qualitative research will be created, implemented, monitored and updated on a regular basis.
4. Research topics, researcher profiles and institutional research opportunities will be accessible internally within the institution, nationally and internationally to further new research projects and collaborations.
5. Programs for research activities and learning activities to build on each other at all levels will be developed and implemented. Qualified researchers, especially at the doctoral level, will be trained; their outputs will be monitored and updated to allocate resources according to need.
6. National and regional need and economic and social benefit will determine the multidisciplinary and interdisciplinary approaches to meeting requirements of diversity in research.
