

RESEARCH QUALITY POLICY

To support research, innovation, and technology development activities without discriminating any language, religion, race, gender and disability within ethical norms, academic freedom and responsibility awareness,

To produce qualified scientific studies based on the cooperation of public, private sector and non-governmental organizations, especially universities where different disciplines work together in the center of principles and objectives in our country's development plans and where sectoral, national and international needs are prioritized,

To become a leading institution by increasing and supporting the goals for developing academic research, innovation and technology through digital transformation infrastructure and artificial intelligence applications,

Increasing the diversity of resources to support research and development and to use resources effectively,

To enrich the student experience through research, innovation and technology development activities and establishing a system that will provide quality assurance for all these activities.
